DERMASAVER CASE STUDY

CASE STUDY

THE LUTHERAN HOME, RIVER FALLS, WI

■ STAPLETON, DIRECTOR OF NURSING, RN, BSN

DERMASAVER ARM TUBE

The skin tear occurred on 09/26/07 and was healed on 10/04/07! This resident has very fragile skin and we were able to heal this skin tear in 9 days by wearing the DermaSaver Arm Tube.

We used a clear film type dressing after realigning the skin tear edges. After approximating the wound edges and applying the film dressing we applied the DermaSaver sleeves immediately. We are a faithful user of the Derma saver sleeves.

This resident was happy to wear the protective sleeve during healing and afterwards for added skin protection.

BEFORE USING DERMASAVER ARM TUBE

9/26/07

AFTER 9 DAYS USING DERMASAVER ARM TUBE

10/04/07
